**For immediate release**

**JOS partners SecureWorks to provide enhanced enterprise IT security solutions  
in Southeast Asia**

*Partnership is the first in Southeast Asia for SecureWorks*

**Malaysia – 15 June, 2016** – JOS, one of Asia’s leading system integrators, solutions providers and technology consultancies, today announced the company’s partnership with SecureWorks (NASDAQ: SCWX) as the global information security solution provider’s first solution partner in Southeast Asia. The partnership expands JOS’s enterprise IT security solutions portfolio in Southeast Asia, keeping in line with the company’s mission to be Asia’s trusted IT partner.

As SecureWorks’ first local security solution partner in Southeast Asia, JOS will introduce SecureWorks along with its security offerings, as the company tailors solutions to meet the distinct needs of customers. JOS will also be reselling and implementing SecureWorks’ portfolio of security offerings, while providing an in-country point-of-contact to clients. The collaboration boosts JOS’s already comprehensive security offerings to include even more holistic end-to-end security solutions that are compatible with any off-the-shelf hardware.

“More than ever, businesses and nations are using more technology to accelerate growth, enhance productivity, improve customer experience and solve key national issues. The resulting heightened connectedness between these corporations and governments with the outside world has made cyber security a key priority. JOS has been working with clients across multiple industries including healthcare, logistics, transportation, manufacturing, services and the public sector for the past 17 years in Southeast Asia, and we recognise that the security needs of organisations have evolved from basic web protection services to fully managed security solutions. With this partnership, JOS, together with SecureWorks, will be better able to meet our clients’ increasingly diverse security needs,” said Freddy Lee, Managing Director, Southeast Asia, JOS.

“We are excited to work with JOS. SecureWorks’ vision has always been to be the global leader in intelligence-driven information security solutions. This vision, tied with JOS’s expertise and presence in the region, means we can help more clients navigate the threat landscape and reduce the risk of breaches occurring,” said Simon Ractliffe, SecureWorks Director and General Manager for Southeast Asia.

Armed with 17 years of experience bringing security solutions to the market, SecureWorks boasts a comprehensive suite of software and intelligence-driven security offerings including:

- **Managed Security Solutions** including IDS/IPS, Firewall Management, Advanced Endpoint Threat Detection, Advanced Malware Protection and Detection, 24 hours a day, 365 days a year
- **Security and Risk Consulting** services to assess the strength of an organisation's security posture
- **Incident Response and Digital Forensics** services to help organisations prepare for any possible scenario
- **Expert insights** from elite security researchers for real-time visibility into current and emerging cyber threats globally

“Effective enterprise security requires more than just technology – it requires proactive risk assessment and encompasses people, real-time threat intelligence, processes and policies. Thus, the need for companies to partner with proven security experts who can provide these solutions is even more prevalent today, as the world has seen how detrimental a slight lapse can be,” added Mr Lee.

JOS's comprehensive enterprise security offerings include technology and services around classifying data assets, managing risk, and establishing the appropriate defence protocols. By offering services such as security audits and penetration testing, and leveraging on its other strengths, JOS helps businesses to take a proactive stance to enterprise security. The company has also established its expertise in security areas including perimeter and network security, host/system, application and endpoint security, advanced persistent threat management, round-the-clock managed security services and security consulting service, as well as identify and access management over the last 17 years for its Southeast Asian clients.

Enterprise security solutions are integral to JOS's total solution portfolio which includes big data and analytics, end-user computing, enterprise applications, cloud and next generation infrastructure.

JOS is a division of JTH Group, a member of the Fortune Global 500-listed Jardine Matheson Group.

SecureWorks is a global provider of intelligence-driven information security solutions exclusively focused on protecting its clients from cyber attacks. SecureWorks' solutions enable organisations to fortify their cyber defences to prevent security breaches, detect malicious activity in real time, prioritise and respond rapidly to security breaches and predict emerging threats.
