

NEWS BRIEF**JOS showcases powerful Network Segmentation
at Cisco Security Connect 2017**

Hong Kong – 9 February, 2017 – JOS presented Network Segmentation at Cisco Security Connect 2017 held at The Hong Kong Convention and Exhibition Centre on 20 January 2017. The JOS booth attracted a large number of visitors who came to experience the benefits of these technologies through the combined efforts of JOS and Cisco. JOS demonstrated how to securely control network access that is role-based and topology- and access-independent by network segmentation. The result is even if hackers make their way into an organisation’s network, they can no longer move freely about and cause widespread damage.

Cisco Security Connect is an iconic industry event for delegates to gain insights and discover new possibilities of global trends from industry thought leaders. More than 400 attendees across different sectors participated in this year’s event, and learned the latest technology on integrated threat defense, next-generation security protection, convergence of network and security, as well as cloud security.

Entitled “Cisco Network as an Enforcer”, JOS shared with the delegates on how JOS and Cisco assist them in taking advantage of digital business opportunities in a more secure way. JOS has been recognised for high quality technology consultancy and deep sector knowledge in the market. The showcase enabled JOS to exhibit the company’s competitive edge over other industry players to help clients achieve business successes, and furnish them with the optimal user experience.

JOS has successfully delivered an exceptional experience to the visitors with proven quality and in-depth knowledge.
