HKBN Enterprise Solutions Brings End-to-End Fibre Connectivity to Retailers in Commuter Rail Stations Across Hong Kong

(Hong Kong – 9 March 2020) HKBN Enterprise Solutions (“HKBNES”) today announced that it will bring high-speed end-to-end fibre broadband and Metro Ethernet (“ME”) connectivity access to retailers in MTR stations across Hong Kong.

HKBNES's end-to-end fibre access will give MTR retailers internet connectivity options as fast as 1Gbps or above. With significant benefits of fibre connectivity in increased bandwidth and reduced latency, users will enjoy increased efficiency for their business operations that include e-payment, point-of-sales system, real-time data processing and Internet of Things. For retailers with higher requirements, ME service offers dedicated point-to-point bandwidth connection, providing a highly secure and reliable network to support their business needs.

The enhanced fibre-to-the-shop connectivity is expected to reach MTR retailers along the Island Line and the Tsuen Wan Line within the coming one month, and fibre access will be extended in phases to MTR retailers along other commuter lines in Hong Kong.

From now until the end of June 2020, retailers in MTR stations who choose to use HKBNES service can enjoy 3 months of free fibre broadband service plus a waiver on installation charge.

“We are happy to help retailers in MTR stations leverage business efficiency through our high-speed fibre network and our portfolio of flexible and secure retail solutions,” said Billy Yeung, Co-Owner and CEO – HKBNES & JOS Group.
