VIRTUAL ATTACKS INFLICT REAL DAMAGE

Cyber attacks are a clear and present danger to all companies – whether brick-andmortar or virtual. As cyber threats become increasingly omnipresent, so does the risk of incurring detrimental losses when a breach occurs.

THE IMPACT OF CYBER **ATTACKS**

Financial losses: fines, legal fees, data recovery services

Disruption to business

Loss of customers' trust and confidence

Reputational damage

JOS INSIGHTS

THE TOP 8 **CYBER SECURITY THREATS**

Find out what cyber threats most companies are vulnerable to and see how JOS Cyber Security Services can help bridge these gaps comprehensively and holistically.

JOS Services

Threats

93% of phishing emails in 2016 contained ransomware. A third of companies were victims to emails impersonating the CEO. Prepare your workforce for such emails.

500 million personal records were stolen or lost in 2015, 81% of data breaches went undetected by affected companies; while 76% of data breaches were caused by their 3rd party vendors. Be updated on the latest threats and trends.

Profiling

48% of data breaches were caused by malicious hackers; the remaining 52% were system glitches or human errors. Because many companies don't have their own cyber threat profiles, they are unaware of their exposure and risk levels - and thus find it difficult to prioritise security investments. Be informed to make smarter cyber security investment.

JOS Services

Threats

The tone from top management is the key to a successful cyber security programme; yet only 53% of corporate boards assign a committee to oversee cyber risks. Make cyber security everyone's responsibility.

Behaviour **Analysis**

The average time a hacker goes undetected in a corporate network is 229 days. Find out your network abnormalities now.

42% of companies currently do not assess their incident response (IR) programmes, despite 76% having a dedicated IR team. Know how you can respond to breaches or attacks.

Ethical Hacking

75% of websites have unpatched vulnerabilities, with 16,000 vulnerabilities recorded in 2016 - up 77% in just 5 years. And that's excluding zero day vulnerabilities. Scan your network before it's too late!

The average consolidated total cost of a data breach is US\$4m. But companies with large volumes of personal consumer data incur much greater losses - US\$20m-\$100m in some cases. Be covered for your liabilities from cyber breaches and attacks.

Cyber Security Offerings

Cyber Essentials is a 30-day* one-time assessment of a company's vulnerabilities to the most common cyber threats. This assessment package will provide insights into the cyber security profile of the company and help it make appropriate security improvements.

*The number of days required to complete the assessment may differ depending on size of company.

The Essentials

Cyber Essentials is a cyber security service pack specially assembled to help companies bridge 8 cyber security threats.
