

Why JOS

 **Experienced Pool of Certified IT Experts**

JOS's team of IT professionals are certified and experienced. They can provide a comprehensive range of IT services specialising in various solutions as well as products. Regular training is conducted to ensure that the team is continually updated on the latest technology and know-how to provide precise IT advisory. JOS also created and deployed development standards to ensure high delivery standards.

 **One-stop Shop**

JOS understands the complexity and difficulty in managing multiple vendors while ensuring their fulfilment of your business requirements. By engaging JOS as your primary vendor, you can streamline business operations by working on advisory and IT development through a single point of contact. We cater to any of your business needs by providing end-to-end solutions, from consultation to deployment and implementation.

 **Tailor-made Solution**

JOS offers a comprehensive range of digital solutions. Our team of IT professionals can provide you with suitable IT solutions that cater to your unique business requirements. We also have the flexibility to ensure reasonable and affordable rates for the long-term solutions we provide.

 **Dedicated Team**

JOS's primary commitment is to satisfy all your expectations and ensure a long-term partnership with you. This objective is why we provide you with a single point of contact and seamless support communications. Our team of highly-trained IT professionals are dedicated, and always ready to ensure top service delivery standards to meet your requirements.

About JOS

With over 60 years' experience in Asia, JOS is a systems integrator, solutions provider and technology consultancy with deep local and industry knowledge and an exceptional ability to execute.

With 2,200 IT professionals working from nine offices across Asia's major business hubs in China, Hong Kong, Macau, Malaysia and Singapore, JOS aims to improve the performance of businesses and governments across the region by applying the best technology to address their challenges.

JOS has extensive experience across a range of industries. We have more than 10,000 private and public sector customers in Asia. Our core capabilities are in cloud computing, big data, enterprise security, enterprise applications, mobility, next-generation infrastructure, and internet of things.

JOS is a division of JTH Group, a member of the Fortune Global 500-listed Jardine Matheson Group.

JOS Cloud Services

Enhance user experience, reduce ownership cost

With the advent of technology and the world becoming increasingly interconnected, it is commonplace for organisations to incorporate digital technologies into business processes as they embark on the digital transformation journey. With the emergence of cloud technologies, more organisations are embracing the adoption of cloud computing business models. In fact, in the new era of service delivery, Everything-as-a-Service (XaaS) is a strategic blueprint which can bring about new opportunities to generate revenue and sustainable growth.

Business Challenges

-  Short turnaround time and inability to meet RTO and RPO goals for data recovery
-  Insufficient resources in the event of unforeseen disasters
-  Large upfront investment costs on IT infrastructure and high ownership cost
-  Lack of business agility to generate insights for business projects
-  Inability to deploy multi-cloud strategies – public, private and hybrid

JOS Cloud Platform allows you to deploy your applications and workloads in a cloud-based architecture and preserve the primary traits of your current IT governance while you benefit the nimbleness of cloud computing.

You can structure isolated workloads in the JOS Virtual Private Cloud (VPC) multitenant environment that is in accordance to your governance policies, and even connect to compute and storage resources in public clouds or on-premise. Unlike your existing on-premises datacentre environment, JOS VPC operates using shared physical infrastructure and a software-defined environment abstraction.

Governing your workloads requires integrating management processes, regulatory requirements, and security processes within a cloud environment. The JOS Cloud Platform model provides basic guidance for creating an organisation's separation of roles, responsibilities, and policies in the cloud.

- Aggregation of Cloud Services
 - Manage compute and store resources across hybrid environments, public and private clouds, or physical and virtual servers
 - Single pane of glass to provision, monitor and manage real-time
 - Self-service orchestration and automation of application deployment
- Automation
 - Manage your own service catalogue and workflow
 - Applications can be added into workflow and can be deployed automatically
 - Built-in workflow engine where workflows can be defined with more than 450 available actions, including multi-level approval
- Advanced Features
 - New features regularly introduced to support end users' dynamic needs

Disaster Recovery -as-a-Service (DRaaS)

It is critical to have a comprehensive availability strategy, providing a consistent user experience and reducing overall cost to protect your data. JOS DRaaS delivers affordable and efficient, imaged-based replication for true DR. It comes with simple, straightforward licensing and pricing. This allows you to overcome your disaster recovery challenges and ensure that your recovery point objectives (RPO) and recovery time objective (RTO) requirements are adhered.

Desktop-as-a-Service (DaaS)

Get access to cost-effective virtual desktops for each user with security and simplicity of a centralised management. You can streamline management and manage costs by consolidating and centralising the desktops while delivering end-users mobility and the freedom to access virtual desktops anytime, anywhere, and on any device with a pay-as-you-use model. Powered by JOS VPC, you do not need to worry about the need to invest in costly hardware and licenses.

Backup-as-a-Service (BaaS)

Modernise your data protection strategy that manages exploding data volumes and handles increasing performance and availability demands. Providing high performance storage with reliable data protection, you can overcome your disaster recovery challenges and fulfill aggressive recovery point objectives (RPO) and recovery time objective (RTO) requirements.

- JOS BaaS for servers or workstations
- JOS BaaS for Office 365
- JOS Storage-as-a-Service

Business Intelligence -as-a-Service (BlaaS)

Get access to SAS analytics, data visualisation, and machine learning capabilities running on JOS VPC – a high-performance cloud environment. Access and create reports and dashboards by extracting data from your core systems, organising it into a high-performance data warehouse, and gain access to this warehouse through a well-designed interface. You can count on our Business Analytics team to make your data journey seamless and meaningful.

Storage-as-a-Service (SaaS)

Avoid hefty upfront investments in storage infrastructure when you subscribe to JOS Storage-as-a-Service. Coupled with JOS BaaS or DRaaS subscription, you need not worry about costly IT infrastructure investment to ensure business continuity.

Disaster Recovery (DR) Workspace

JOS DR Workspace is an emergency workspace to help ensure your work remains uninterrupted. It comes equipped with all that you need to be able to work efficiently such as tables, chairs, workstations and all office supplies for immediate use, as well as network connectivity that will allow you to continue operating your business with ease and efficiency. Supported by our experience team of Engineers and 24x7 Support Operations Centre, we ensure that your DR activation is seamless.
