

Managed Cloud Services

Cloud computing promises efficiency and cost-saving. However they can easily be wiped out by overheads and complexities. That's where managed cloud services come in, providing a holistic view of cloud spending that enables organisations to optimise costs. They also make it safer, with consistent and easy-to-enforce security policies across all on-premise and cloud infrastructure. The HKBN JOS portfolio includes:

Multi-cloud Management Service

Whether your business prefers a private, public or hybrid cloud, HKBN JOS can help you every step of the way. From choosing the most appropriate cloud solution and picking the right vendor, to operating, integrating and protecting your infrastructure 24x7.

Cloud Enablement and Migration Service

Start the cloud journey with a Migration Assessment on current workloads, architecture and security requirements. Then take advantage of a Custom-made Migration Plan, crafted by HKBN JOS Experts and overseen from beginning to end by a Dedicated Onboarding Manager.

Backup-as-a-Service

While 34% of companies never test physical tape backups, a staggering 77% of those who do test found failures. HKBN JOS Cloud-based Backup-as-a-Service eliminates such worries, saves time and puts data at your fingertips for easy retrieval.

Cloud Access Security Management

HKBN JOS provides Managed Cloud Security and add-on Cloud Security Services, covering everything from secure access through multifactor authentication, to policy enforcement and compliance.
