MAKE [IoT] REAL

Connecting Sensors and Systems

Data collected from the IoT sensors will only make sense and create business value if it can be integrated with existing enterprise systems. But bridging data from sensors with legacy systems is often the major bottleneck in IoT.

Managing different types of sensors, consolidating data with different formats and protocols, are just some of the obstacles to overcome before IoT data can be integrated with existing enterprise systems to reveal business value. HKBN JOS's integration skills and solid industry experiences help you overcome these obstacles to unlock business value in IoT.

Device

- IoT Device
- IoT Gateway

Network

- 4G, Wi-Fi, 5G/ NB-IoT, LORA

Integration & Management

- Data Integration
- Device Life Cycle Management
- Customisation

Business Application

- Facilities & Space Management
- ERP/ SCM
- Big Data

HKBN JOS's Professional Team Bring to You :

- Solution Architect
- Partner Ecosystem
- Project Delivery
- Maintenance/ Managed Services

Contact HKBN JOS at connect@jos.com or +852 2565 2011 to translate sensors into business value!
