

# Smart Patient Care

## Providing Better Care to Patient

The power of HKBN JOS's Smart Patient Care Solution is its integration of contact-free sensors with patient system backend to medical staff's mobile devices. It enables continuous monitoring of patients' condition (Heart Rate "HR", Respiratory Rate "RR" and motion), which allows caregivers to review real-time vital signs information, motion and trends from a central display station, and to receive real-time notifications on the vital signs changes from mobile devices.

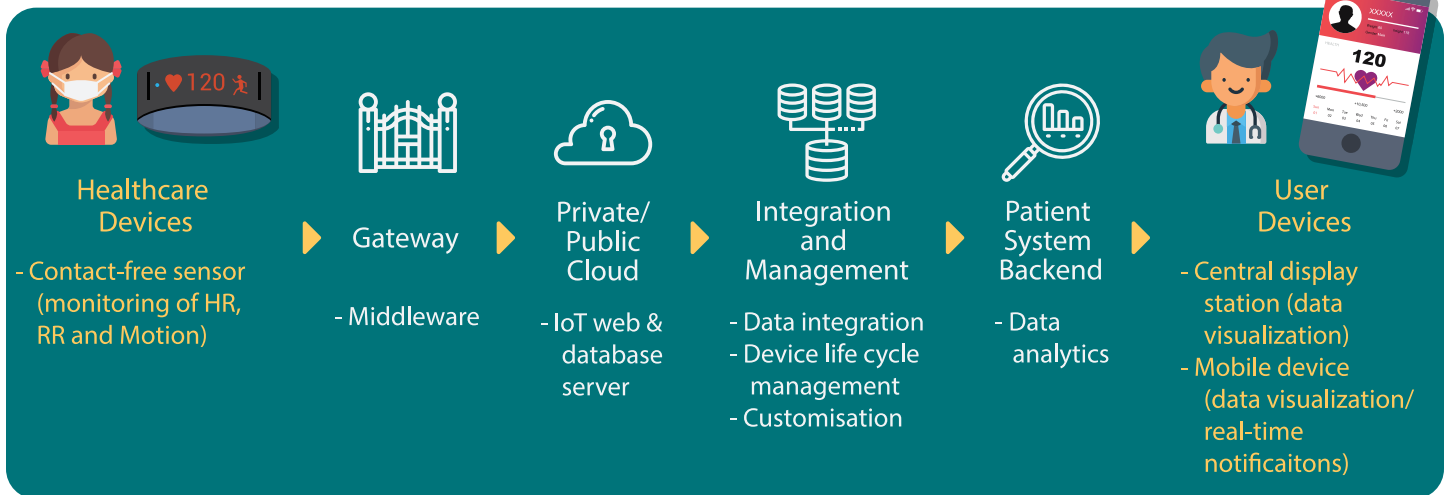

### Medical Staff are thus Empowered for

- Early detection of patient deterioration
- Fall prevention
- Pressure ulcer prevention
